While 44-tonne tractor prices have come down, uncertainty surrounding Brexit means other bills have risen, reports David Batty

# Costs on the rise 

Truck and van operators have seen another rise in operating costs this year, the main culprits being increases in fuel, wages, insurance premium tax, tyres and repair and maintenance.

Unsurprisingly, given the post-Brexit referendum slump in the value of the pound, many operating costs have risen. One exception however is the cost of 44 -tonne $6 \times 2$ tractors. Their fall in price is possibly due to the arrival of a number of new generation and facelifted versions and, because that segment of the market is a huge part of OEMs' production and sales, they are more competitively priced than last year. This is despite rises in raw materials costs that account for a large proportion of truck components: steel has risen by 11\%, zinc $21 \%$ and aluminium $9 \%$.

Currency exchange rates continue to play a
big part in the rise in prices facing UK operators, with the cost of road fuel seeing a $7 \%$ and tyres a $6 \%$ year-on-year increase.
These price movements have pushed up the standing and running costs in all sectors of the industry - vans, rigids and artics. The recent Bank of England announcement of a quarter point interest rate rise to $0.5 \%$, coupled with the lack of confidence in the industry surrounding Brexit, may well mean that a lot of operators will replace fleet less often. Seven years is typically the norm - this may well push up residual values in due course.
Since April we also have had the Apprenticeship Levy on employers with an annual payroll in excess of $£ 3 \mathrm{~m}$. Smarter operators should see this as a benefit and not a cost, and look to maximise the opportunities to bring into the industry some much-needed young talent and get them trained up.
